

iscatex is a budget based panel and pole system using fabricated aluminium panels and 90mm diameter poles with a simple channel fitting to hold any size panel securely.

The system can be constructed as a single or double-sided sign.

Designed to hold illuminated sign boxes and any material that is 20mm thick.

iscatex

iscatex is designed with price in mind, this clever system enables a variety of sign materials to be carried by the same standard pole.

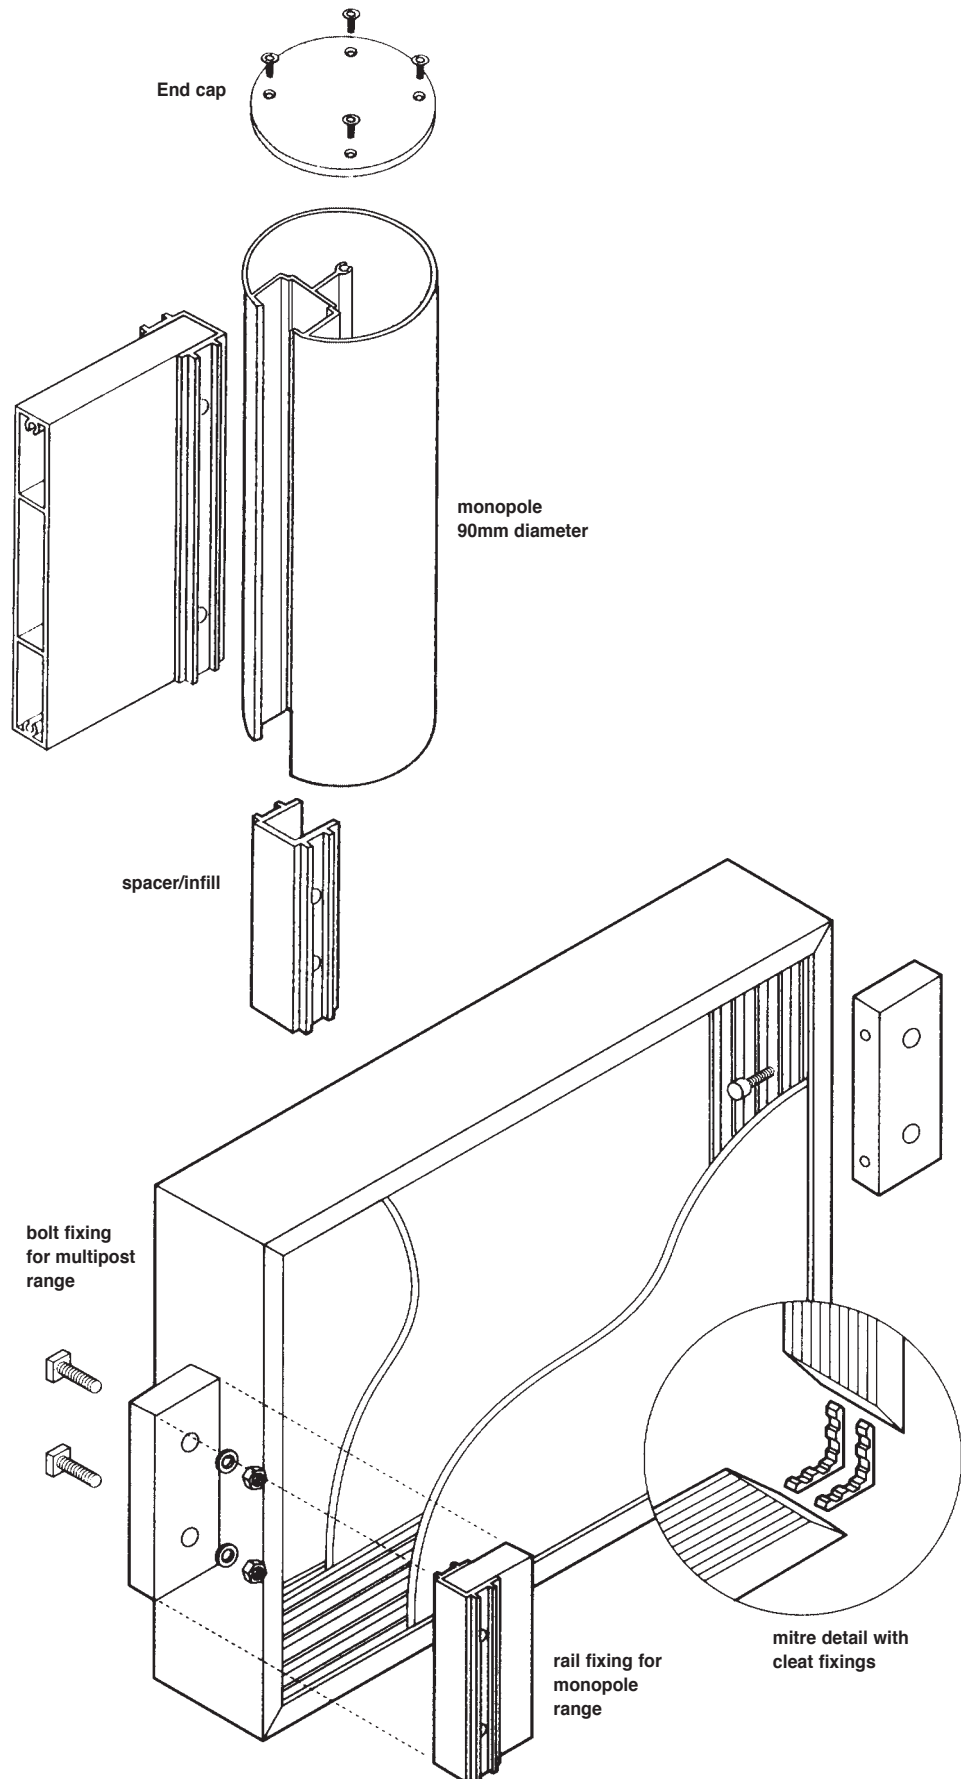

concept

The design of the reversible infill enables it to be used as a capping section for a variety of 20mm thick materials and also as a closure to fill in the remaining section of pole.

finish

Face panels from folded aluminium can be aluchrome dipped and then powder coated to any standard colour. Poles and infill sections can be treated in the same way.

Other composite face panels could be treated in accordance with manufacturers specifications.
